If your organizations relies on paper forms that need to be handwritten and/ or transcribed to complete your **inspections, audits and observations**, and you're looking for something that's faster, easier and more technologically advanced, look NO further!

inspectiTRAC™ is an automated inspection system delivered on a Windows tablet or computer. Easy to manage inspection criteria and location visuals make the process trouble-free. inspectiTRAC™ **reduces employee inspection time, saves you money,** and reduces risk.

**inspectiTRAC™** takes conducting inspections, audits and observations to a whole new level, using state-of-the-art Windows-based technology. This **automated inspection software** designed for inspections, audits and observations is delivered on a tablet computer that mobilizes the process of data collection and evaluation. It can also be used on a desktop PC or laptop for additional access points.

inspectiTRAC takes the inspections, audits, and observations you are already using and mobilizes them while **decreasing errors, improving responsiveness and reducing risk**. Data collection and data entry times can be reduced up to 80% with mobilization, resulting in cost savings, improved accuracy, faster response times and elimination of document storage.

The system is comprised of three parts:

- [inspectiTRAC Administrator](#) — used to setup departments, create and make changes to inspections and maps.
- [inspectiTRAC Data Collector](#)- the software used to collect data. The software is available for use on Windows based devices.
- [inspectiTRAC Manager](#) - a cloud-based management system for reporting, alerting, and scheduling. It includes corrective action management and dashboards that allow users to view information important to them.

So why choose inspectiTRAC:

#### Reduces Risk / Exposure via:

- **Standardization**
  - Standard questions are always accurate and up-to-date with real-time updates
  - Illegible handwriting and data entry errors are eliminated
  - Inspections, audits and observations can be scheduled and essential resources notified
  - Mapping of inspection item/equipment location linked to the correct form eliminates unproductive time and missed inspections.
- **Access to Data/Reports**
  - Results are documented and stored in a secure database ensuring a complete audit trail
  - Dashboard allows for easy access to data and reports
  - Corrective actions can be assigned, documented, tracked and managed
  - Many standardized reports are available, with a custom reporting option

#### Saves Time and Money

- Up to 80% reduction in data collection and data entry
- Paper consumption and document storage is virtually eliminated
- ROI range from 5 to 1 to 20 to 1. Payback each year in only one to two months.
- Easier access to data improves response time to failures/concerns

#### Customizable

- Flexible system includes the ability to use visual mapping and multiple scoring scales
- Facility maps and questions can be updated or removed in real time, ensuring complete audit trail
- Custom notifications allow you to notify individuals/teams to complete a task
